Q1. Which months had the highest revenue in each year?

The month with the highest revenue each year was: - **2022:** March, with revenue of **■5.07 crore**. - **2023:** October, with revenue of **■4.15 crore**. - **2024:** March, with revenue of **■5.39 crore**.

SQL

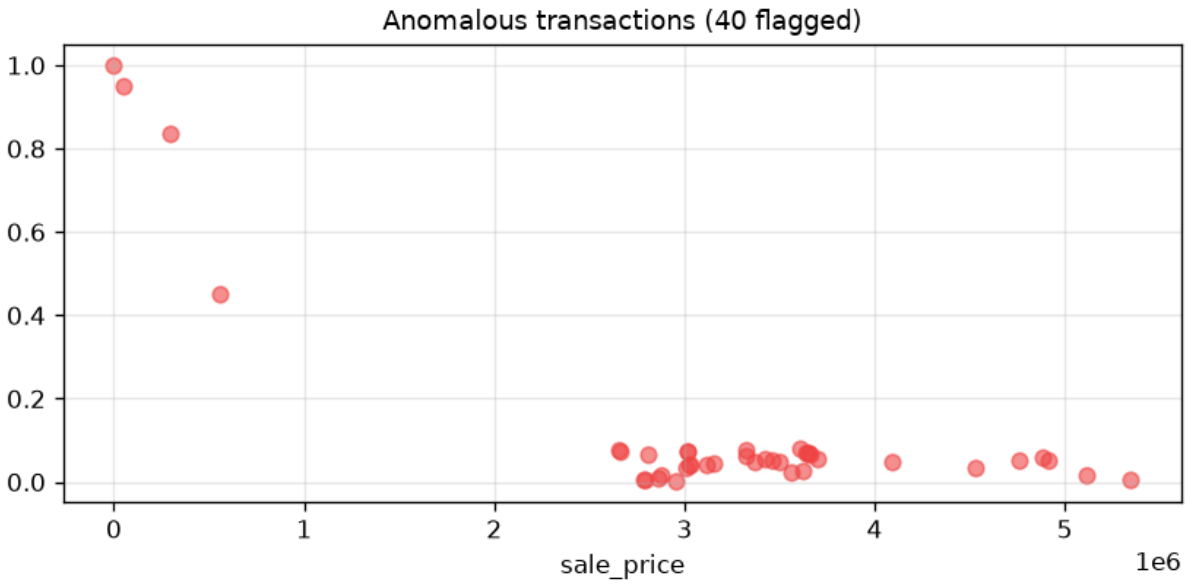

```
SELECT year, month, revenue FROM (SELECT CAST(EXTRACT(YEAR FROM s.sale_date) AS INT) AS year,
CAST(EXTRACT(MONTH FROM s.sale_date) AS INT) AS month, SUM(s.sale_price - s.discount) AS
revenue, ROW_NUMBER() OVER (PARTITION BY CAST(EXTRACT(YEAR FROM s.sale_date) AS INT) ORDER BY
SUM(s.sale_price - s.discount) DESC) AS _w FROM sales AS s GROUP BY year, month LIMIT 1000)
AS _t WHERE _w = 1
```

Rows affected: 3

Q2. Find unusual sales transactions.

The Isolation Forest flagged **40 out of 800** sales transactions as anomalous (5 % contamination). The top offenders feature egregiously low sale prices relative to their listed prices, with discount percentages approaching or exceeding 100 % (e.g., ■1.00 sale for a ■1,053,362.99 listed item) and extreme discount amounts that far exceed the cost price. These outliers warrant immediate review by the finance team to verify pricing accuracy and detect potential fraud or data entry errors.
